

Awesense Energy Transition Platform Use Cases

- demoable implementation

- demoable & open sourced implementation

UC01 Coincident Peak and Non-Coincident Peak Analysis	ⓘ		
UC02 Power Factor Analysis			●
UC03 Phase Balance Analysis			●
UC04 Transformer Capacity Analysis for EV Charging	ⓘ		
UC05 Reversed Power Flow and PV Capacity Analysis	ⓘ		
UC06 GIS Grid Connectivity Validation and Correction			●
UC07 Asset Management - Cables and Lines			
UC08 Asset Management - Substations			
UC09 EV Charging & Use of Reserved Capacity Analysis			
UC10 Connected Loads [kW] vs. Actual Phase Balance Analysis			
UC11 Unserved Energy Due to Outage Analysis			
UC12 Grid Temperature Monitoring			
UC13 Master Circuit Breaker Value vs. Measured Values Analysis	ⓘ		
UC14 Onsite Generation and Ghost Load Analysis			
UC15 Utility Data Challenge Hub			●
UC16 Registered PV Generation Analysis	ⓘ		
UC17 Actual vs. Contracted Grid Capacity Analysis	ⓘ		
UC18 Grid Alerts & Warnings			●
UC19 IoT Health Index and Overview			●
UC20 Unexpected Generation Identification			
UC21 Geospatial Analysis of Grid Alerts & Warnings			●
UC22 Topological Grid Segmentation			●
UC23 Analysis of Grid's Segments and Elements			●

Awesense Energy Transition Platform Use Cases

TGI

UC24 Analysis of Planned Outage for Assets Upgrades			
UC25 Analysis for Minimizing Quantities of IoT and Meter Devices			
UC26 Transformer Loading Assessment Analysis			
UC27 IoT Sensor Billing			
UC28 Energy Balancing for Revenue Protection			
UC29 Non-Technical Loss Investigations Management			
UC30 Suspicious Pattern Identification & Analysis			
UC31 Grid and Time Series Visualization			
UC32 Power Outage Visualization			
UC33 MV Grid Optimization Analysis			
UC34 EV & Appliance Disaggregation
