

Analysis of Grid Segments and Elements - TGI Use Case Notes

[UC23-01] - Awesense Energy Transition Platform Use Case

Overview

This manual is intended to:

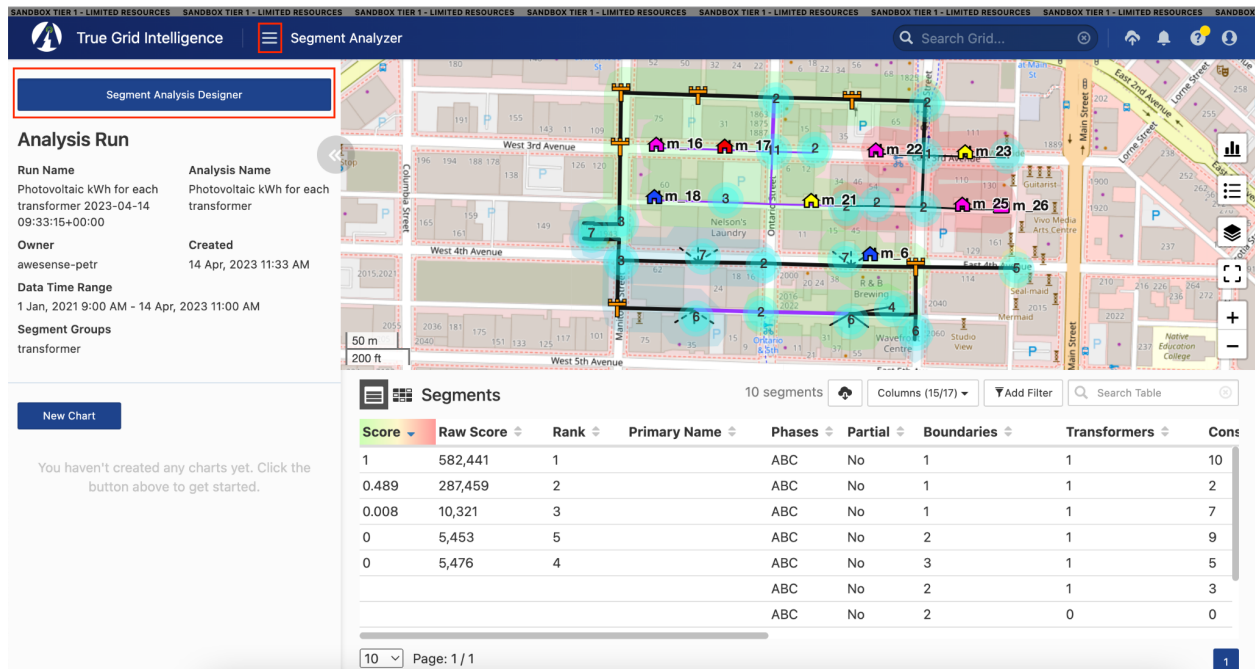

- Provide instructions to create the selected Use case in True Grid Intelligence (TGI).

For more details about the Analysis of Grid Segments and Elements and how it can be analyzed using Awesense's Energy Transition Platform, please refer to the [UC23-01 - Analysis of Grid Segments and Elements.pdf](#) document.

TGI Use Case Notes

This document shows examples of using this Use Case along with a description of how to create such a Use Case on your data and screenshots directly from the TGI visualization interface.

Segment Analyzer can be found directly in TGI in the main menu (select from the main menu - top hamburger icon).

Analysis of Grid's Segments:

To create an Analysis, click on "Segment Analysis Designer".

Analysis of Grid's Segments or Elements in the Awesense Platform is in general composed of four steps:

1. Create and upload analysis data sources,
2. Creation of analysis factors,
3. Creation of analysis,
4. Running the analysis.

Delete RunView Run Results

In the new window, select "Factors".

For the analysis, it is necessary to create a Factor. It is possible to use one of the already created factors (on the left side) or you can create a new factor using the "New Factor" button. For the creation of new factor, the factor's data need to be uploaded to TGI.

Description

Segment Factor Formula

Normalization

If you are creating a new factor, you select a name etc. The calculation is set in the "Segment Factor Formula" section:

- transformation is the way of calculating the data - for example, median, sum etc.
- segment data sources are the uploaded data to be calculated. Some of them are already prepared, such as the length of the line, and others can be uploaded using a CSV file (there is a "Data Sources" button in the top menu of this window).

Then it is necessary to create an Analysis - in the "Analyses" section. It is possible to use one of the already created Analyses (on the left side) or you can create a new analysis using the "New Analysis" button.

☐ Allow factors with different normalization schemes ?

If you are creating a new analysis, you select a name etc. It is then necessary to select a factor using the "Select Segment Factor" button and determine its weight. Weight will be applied if we have multiple factors. Finally, click on "Add Factor" and "Save".

Run Analysis

Finally, it is necessary to run this analysis. It is necessary to select one of the analyses from the left side and the run is done in the "Analysis Run Settings" section at the bottom of the window, where you select How the calculator should handle data overlaps and select the grid for analysis using the "Choose Segment Groups" button. Here the segment created using UC22 - Topological Grid Segmentation is selected. Finally, the "Run Analysis" button is clicked.

Analysis of Grid's Elements:

The analysis of grid elements is very similar to the grid segment analysis described in this document, so it is possible to use this document to analyze elements.

To display the results of the grid element analysis, select "Explorer" from the main menu, then click on the "Grid Element Statistics" icon on the right side of the map. In the Choose an analysis run dropdown select an available analysis run; any grid elements that have an analysis score for that run will have their icons on the map colored on a green-yellow-red scale; grid

elements without a score will have a gray icon. To revert to element coloring by phase, deselect the analysis run.

General Note

- This description was created for TGI version 3.10.0. For future versions of TGI, the process might be slightly different.
- Access to the different parts of TGI varies depending on the permissions of the user.
- Users on the Sandbox environments currently have read-only permissions, therefore, this use case may be accessible only for viewing, not creation or editing. If you are interested in the latter, please contact Awesense.
- Some of the data for this use case may be available only on Sandbox tiers 2 & 3, but not on tier 1. If you are interested in upgrading your tier access, please contact Awesense.
- For more information please contact tools@awesense.com.
