

Grid and Time Series Visualization - TGI Use Case Notes

[UC31-01] - Awesense Energy Transition Platform Use Case

Overview

This manual is intended to:

- Provide instructions to create the selected use case in TGI.

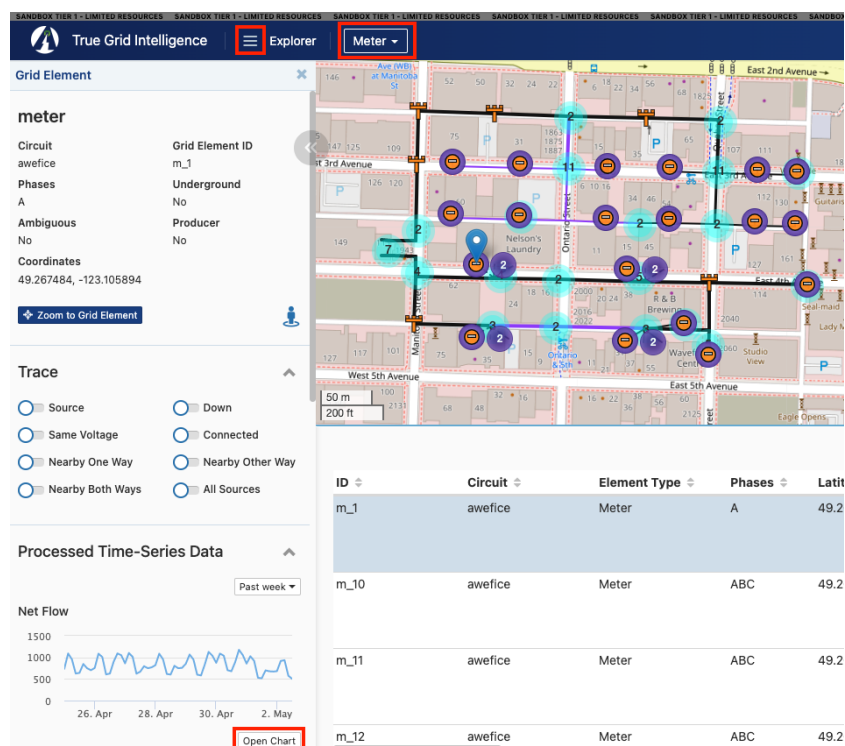

For more details about Grid and Time Series Visualization and how it can be analyzed using Awesense's Energy Transition Platform, please refer to the [UC31-01 - Grid and Time Series Visualization.pdf](#) document.

Manual and TGI screenshots

This document shows the implementation process of the mentioned use case in the TGI visualization interface along with a description of how to create such a use case on your data.

The ability to visualize data ingested by the Awesense Platform is very important since data exploration is many times the first step to conducting any type of analysis.

For viewing the grid along with the time series, the Explorer tool is best suited (select from the main menu - top hamburger icon). Let us say, the user wants to visualize the grid's meters on the map. The user would choose the Meter element from the menu.

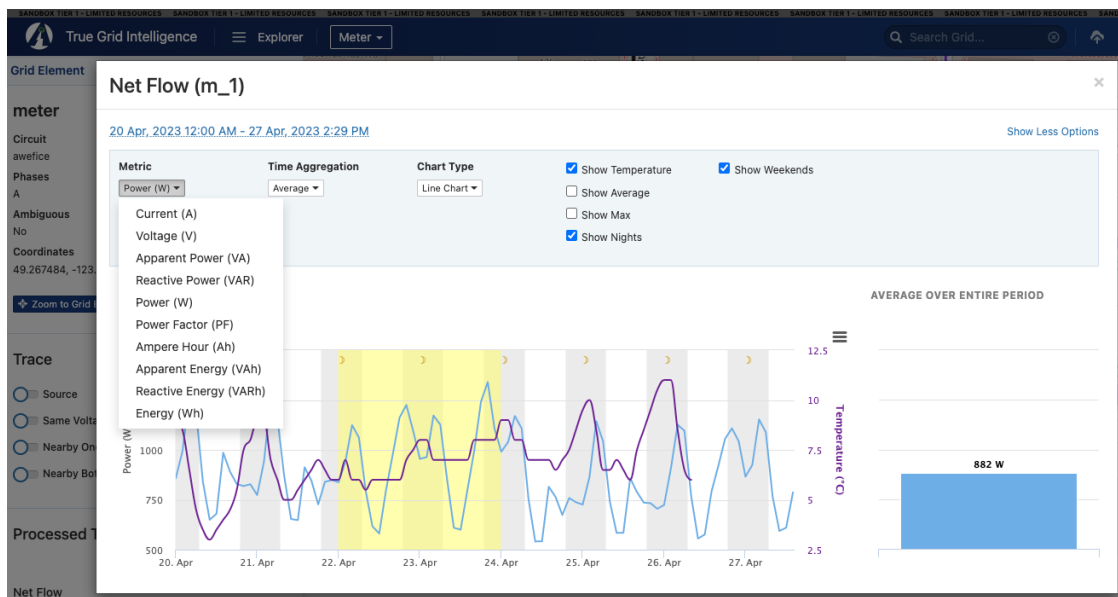

Grid and Time Series Visualization - TGI Use Case Notes

[UC31-01] - Awesense Energy Transition Platform Use Case

In this case, all Meters are highlighted on the map. Many other elements which have time series linked to them can of course be selected.

Time series data is previewed in the left sidebar. Clicking on "Open Chart" will open a new window with additional options for displaying this data and other additional helpful features.

It is possible to view different measured values for different selected periods. The period can be selected using the date on the top left or by dragging directly into the graph.

Different ways of displaying the data in terms of their Time Aggregation are also possible - Average, Sampling, and Peak Demand. This makes it possible to display peak values or, conversely, the average.

Using the "Show More Options" button it is possible to display other supporting indicators such as Show Temperature, Show Weekends, Show Nights etc. or add a maximum and average value to the graph for easier analysis of the values.

General Note

- This description was created for TGI version 3.10.0. For future versions of TGI, the process might be slightly different.

Grid and Time Series Visualization - TGI Use Case Notes

[UC31-01] - Awesense Energy Transition Platform Use Case

- Access to the different parts of TGI varies depending on the permissions of the user.
- Users on the Sandbox environments currently have read-only permissions, therefore, this use case may be accessible only for viewing, not creation or editing. If you are interested in the latter, please contact Awesense.
- Some of the data for this use case may be available only on Sandbox tiers 2 & 3, but not on tier 1. If you are interested in upgrading your tier access, please contact Awesense.
- For more information please contact tools@awesense.com.
