

Power Outage Visualization - TGI Use Case Notes

[UC32] - Awesense Platform Use Case

Overview

This manual is intended to:

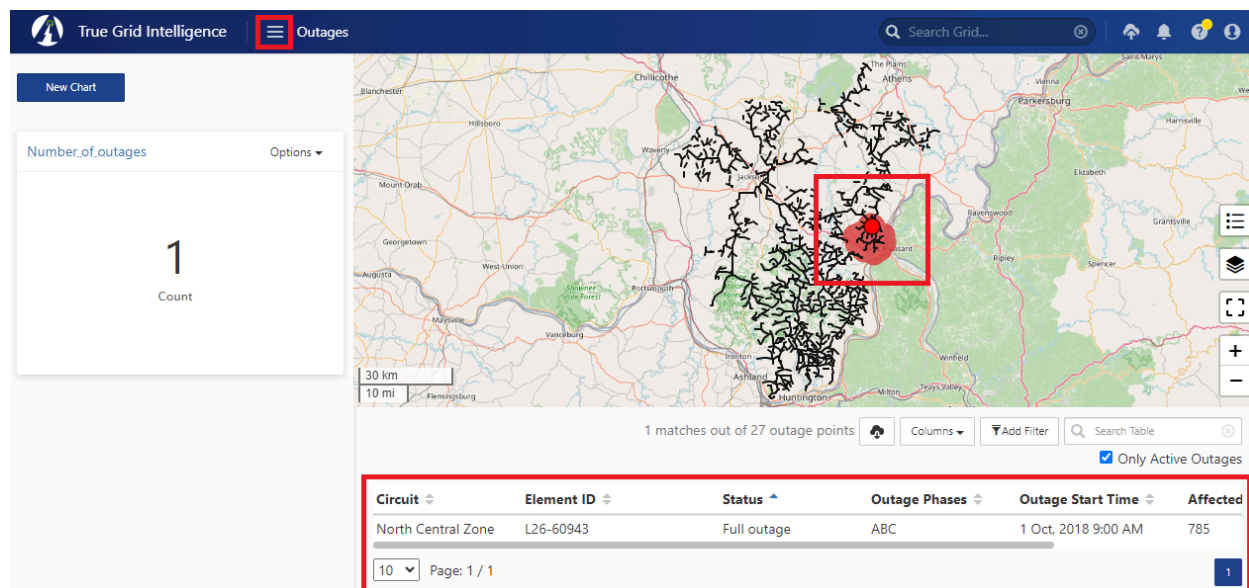

- Provide instructions to create the selected use case in True Grid Intelligence (TGI).

For more details about Power Outage Visualization and how it can be developed using Awesense Platform, please refer to the [UC32 - Power Outage Visualization.pdf](#) document.

TGI Use Case Notes

This document shows the implementation process of the mentioned use case in the TGI visualization interface, along with a description of how to create such a use case on your data. One of the prerequisites of functional outage visualization is the integration of outage data. Outage data can be integrated directly from the Outage Management System (OMS) or from an outage-detecting device.

Outages can be found directly in TGI's main menu (select from the main menu - top hamburger icon).

The outage can be selected either directly on the map or in the table below the map. Active outages are indicated by red boundaries (highlight) around the affected area. The table contains additional detailed information about the outage.

Power Outage Visualization - TGI Use Case Notes

[UC32] - Awesense Platform Use Case

A screenshot of the True Grid Intelligence (TGI) web application. The interface is divided into several sections. On the left, there is a sidebar with a search bar and a list of filters. The main area displays a map of a region with a network of black lines representing power lines. A red circle highlights a specific location on the map. Below the map, there is a table with columns for Circuit, Element ID, Status, Outage Phases, Outage Start Time, and Affected. The table shows one row of data for a full outage. The sidebar on the left contains a section for 'Outage' with details for 'arc:PRIMARY_CONDUCTOR', including Circuit, Grid Element ID, Outage Phases, Outage Start Time, and a 'Zoom to Grid Element' button. Below this is a 'Trace' section with various filters. The bottom of the interface shows a pagination bar indicating 'Page: 1 / 1'.

After selecting an outage, you'll see information about the outage on the left - such as how many customers were affected by the outage, outage start time, outage phases, and more. It is also possible to click through to Grid Element or Placement to obtain more information about the outage. The outages also have the option to be deleted or resolved using the hamburger menu.

General Note

- This description was created for TGI version 3.13.0. The process might be slightly different for future versions of TGI.
- Access to the different parts of TGI varies depending on the permissions of the user.
- Users on the Sandbox environments currently have read-only permissions, therefore, this use case may be accessible only for viewing, not creation or editing. If you are interested in the latter, please contact Awesense.
- Some of the data for this use case may be available only on Sandbox tiers 2 & 3, but not on tier 1. If you are interested in upgrading your tier access, please contact Awesense.
- For more information please contact tools@awesense.com.
